

Chapter 4 - System Design

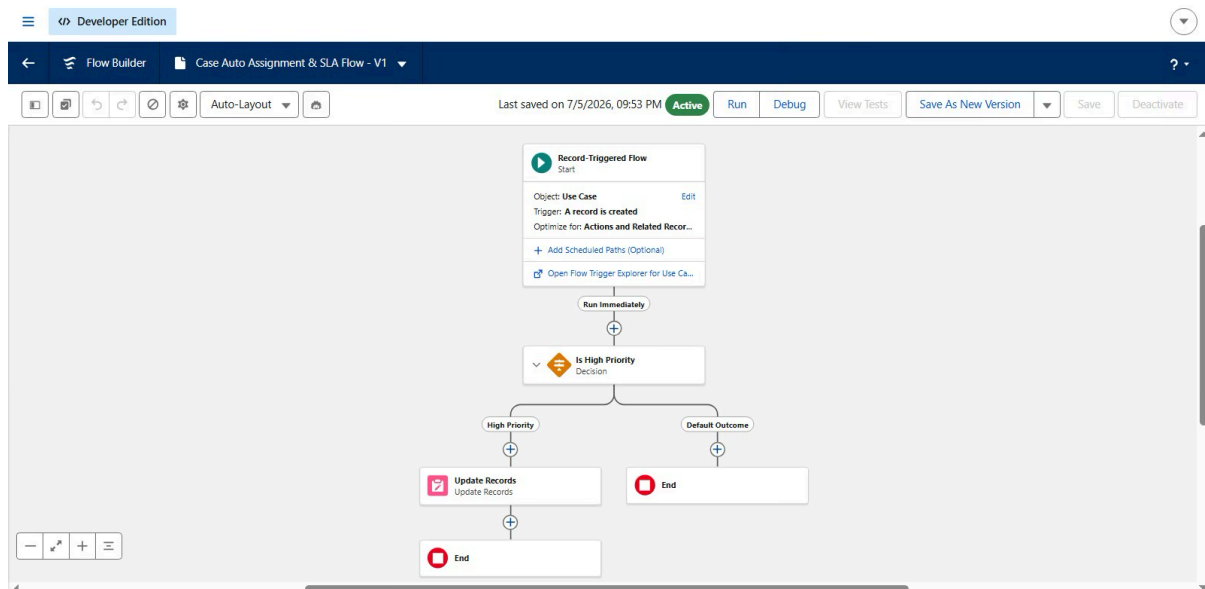

4.1 System Design Overview

The AI-Powered Customer Support & Service Automation system was designed using the Salesforce Lightning Platform. The design combines custom objects, lookup relationships, validation rules, record-triggered flows, queues, Prompt Builder, and Lightning App Builder to automate customer support processes while maintaining security and data integrity.

4.2 System Architecture

The application follows a layered architecture:

- **Presentation Layer:** Salesforce Lightning UI
- **Application Layer:** Flow Builder, Validation Rules, Prompt Builder
- **Data Layer:** Customer, Product, Order and Use Case objects
- **Security Layer:** Profiles, Queues and Field-Level Security
- **AI Layer:** Prompt Builder for AI-generated summaries

4.3 Custom Object Design

Object	Purpose
Customer	Stores customer information.
Product	Stores merchandise/product details.
Order	Stores customer purchase information.
Use Case	Stores customer support requests and AI summaries.

4.4 Customer Object Design

Field	Data Type
Customer Name	Text
Email	Email
Phone	Phone
Customer Type	Picklist

Developer Edition

Customer Name	Name	Text(80)		✓	
Customer Type	Customer_Type__c	Picklist			
Email	Email__c	Email			
Last Modified By	LastModifiedById	Lookup(User)			
Owner	OwnerId	Lookup(User,Group)		✓	
Phone	Phone__c	Phone			

4.5 Product Object Design

Field	Data Type
Product Name	Text
Product Code	Text
Category	Picklist
Warranty (Months)	Number
Active	Checkbox

The screenshot shows the Salesforce Setup interface, specifically the 'Object Manager' section for a 'Use Case' object. The 'Fields & Relationships' tab is selected, displaying a list of 10 fields sorted by label. The fields are: AI Summary (Long Text Area), Created By (Lookup), Issue Category (Picklist), Last Modified By (Lookup), Order (Lookup), Owner (Lookup), Priority (Picklist), Product (Lookup), and Status (Picklist). The 'Indexed' column shows checkmarks for Order, Owner, Product, and Status. The interface includes a sidebar with navigation options like Details, Fields & Relationships, Page Layouts, and a top navigation bar with Setup, Home, and Object Manager.

FIELD LABEL	FIELD NAME	DATA TYPE	CONTROLLING FIELD	INDEXED
AI Summary	AI_Summary__c	Long Text Area(32768)		
Created By	CreatedById	Lookup(User)		
Issue Category	Issue_Category__c	Picklist		
Last Modified By	LastModifiedById	Lookup(User)		
Order	Order__c	Lookup(Order)		✓
Owner	OwnerId	Lookup(User,Group)		✓
Priority	Priority__c	Picklist		
Product	Product__c	Lookup(Product)		✓
Status	Status__c	Picklist		

4.6 Order Object Design

Field	Data Type
Order Number	Auto Number
Order Date	Date
Status	Picklist
Customer	Lookup (Customer)
Product	Lookup (Product)

4.8 Object Relationship Design

Relationships implemented:

- Order → Customer (Lookup)
- Order → Product (Lookup)
- Use Case → Product (Lookup)
- Use Case → Order (Lookup)

These relationships ensure data consistency and eliminate redundancy.

The screenshot shows the Salesforce Setup interface in Developer Edition. The navigation menu on the left includes Setup, Home, and Object Manager. The main content area is titled 'Use Case' and displays the 'Use Case Validation Rule' configuration for the 'Damage_Requires_Priority' rule. The rule is active and has a description: 'Priority is mandatory for Damage cases. Ensures Priority is mandatory for Damage cases.' The error condition formula is: `AND( (SPICKVAL(Issue_Category__c,"Damage"), ISBLANK(TEXT(Priority__c))) )`. The error message is: 'Priority is mandatory for Damage cases.' The error location is: 'Priority'. The rule was created by 'Vishal Karthik Raja' on 7/5/2026 at 10:09 AM and modified by the same user on the same date and time.

Rule Name	Purpose	Object
Damage_Requires_Priority	Priority mandatory for Damage cases	Use Case
Warranty_Delivery_Requires_Priority	Priority mandatory for Warranty and Delivery cases	Use Case

4.9 Validation Rule Design

Rule Name	Purpose	Object
Damage_Requires_Priority	Priority mandatory for Damage cases	Use Case
Warranty_Delivery_Requires_Priority	Priority mandatory for Warranty and Delivery cases	Use Case

4.10 Flow Design

Flow 1: Case Assignment Flow

- Trigger: Record Created or Updated
- Object: Use Case
- Decision based on Issue Category.

Flow 2: Case Auto Assignment & SLA Flow

- Trigger: Record Created
- Checks Priority = High
- Assigns Owner to Damage Support Queue.

4.11 Queue Design

Queue	Purpose
Damage Support Queue	Handles high priority damage cases.
Warranty Support Queue	Handles warranty related support requests.

4.12 Prompt Builder Design

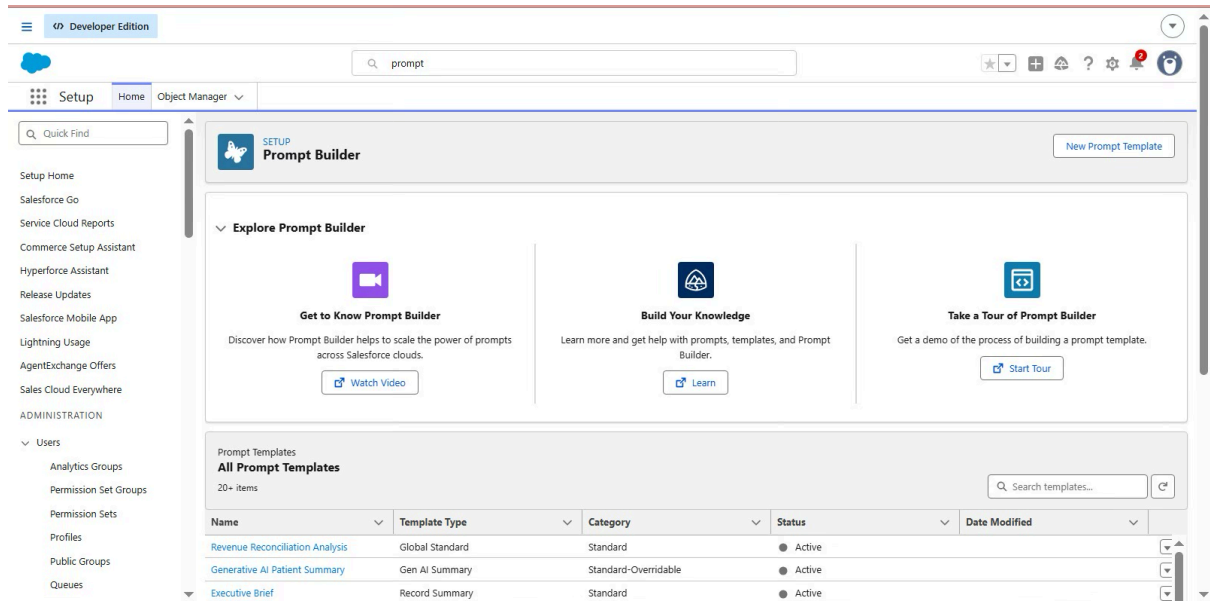

Prompt Template: MetadataInspection

Prompt Type: Field Generation

Object: Use Case

Output Field: AI Summary

Prompt Builder generates professional AI summaries for customer support cases using record information.

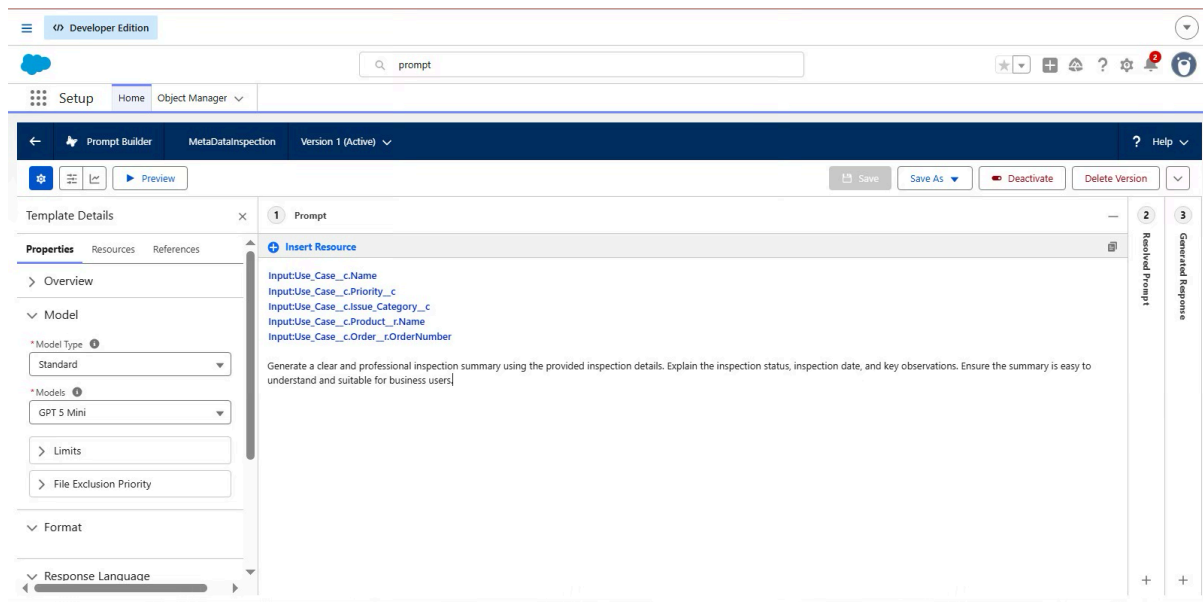

4.13 Lightning Application Design

Application Name: AI-Powered Customer Support & Service Automation

Navigation:

- Home
- Customer
- Product
- Order
- Use Case
- Reports
- Dashboards

4.14 Security Design

- Profiles
- Queues
- Field-Level Security
- Validation Rules
- Role-based access

4.15 Chapter Summary

The system design combines Salesforce data modeling, automation, AI integration, and security into a modular architecture. The design ensures scalability, maintainability, and efficient customer support management.
